AD 6 IMPLEMENTATION CONSTRAINTS

Constraints	Possible effect of constraint	Details
Hardware and software platforms	Website design is not responsive, so will it will not be useable on mobile devices. This will greatly reduce the number of people able to utilize the website.	Limited time to made it difficult to implement flexbox. With additional time the HTML and CSS could be refactored to make it responsive.
Performance requirements	Need to run files locally as only hosted on computer. This limits the websites viewability to someone using this computer.	Though at the moment there is no external url, it can be uploaded to Heroku making it externally viewable.
Persistent storage and transactions	it will save adoptions made but only internally. This could lead to issues with data corruption, increased costs and time from not running the database on an external dedicated machine.	I would like to add an individualized page for all donations/adoptions made.
Budgets	There was no budget used in this project	Personal project for the course of codeclan.

Time	We had a week to work on this project, as time was short I was unable to add all the planned functionality that I wanted to.	I have decided to continue working and expanding the functionality after the course is completed.
